DIVISION FACTS
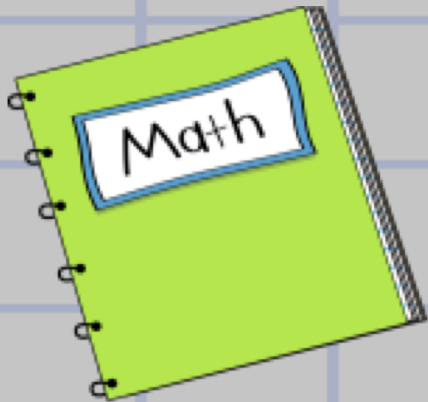

Math

Fluency Set 5

DIVISION FACTS set 3

REMEMBER:
DIVISION IS THE INVERSE OF MULTIPLICATION!
SO...
if 5X3=15 THEN 15÷3= 5

5÷5=1	20÷5=4	35÷5=7	50÷5=10
10÷5=2	25÷5=5	40÷5=8	
15÷5=3	30÷5=6	45÷5=9	

$5 \div 5 =$	$20 \div 5 =$
$10 \div 5 =$	$25 \div 5 =$
$15 \div 5 =$	$30 \div 5 =$

$$35 \div 5 =$$

$$45 \div 5 =$$

$$40 \div 5 =$$

$$50 \div 5 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do 24÷4= and get 4 but you **CANNOT** flip it and do 4÷24 to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving 24÷4=? Then just re-state the problem as 4x ? =24 -→ think "what times 4 will give me 24?"
