

DIVISION FACTS

Fluency set 6

DIVISION FACTS *set 6*

REMEMBER:
DIVISION IS THE INVERSE OF MULTIPLICATION!

so...

if $5 \times 3 = 15$ then $15 \div 3 = 5$

$$6 \div 6 = 1$$

$$24 \div 6 = 4$$

$$42 \div 6 = 7$$

$$60 \div 6 = 10$$

$$12 \div 6 = 2$$

$$30 \div 6 = 5$$

$$48 \div 6 = 8$$

$$18 \div 6 = 3$$

$$36 \div 6 = 6$$

$$54 \div 6 = 9$$

$$6 \div 6 =$$

$$24 \div 6 =$$

$$12 \div 6 =$$

$$30 \div 6 =$$

$$18 \div 6 =$$

$$36 \div 6 =$$

$$42 \div 6 =$$

$$54 \div 6 =$$

$$48 \div 6 =$$

$$60 \div 6 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do $24 \div 4 =$ and get 4 but you **CANNOT** flip it and do $4 \div 24$ to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving $24 \div 4 = ?$ Then just re-state the problem as $4x = 24$ -> think "what times 4 will give me 24?"
