

DIVISION FACTS

Fluency set 10

DIVISION FACTS set 10

REMEMBER:
DIVISION IS THE INVERSE OF MULTIPLICATION!

so...

if $5 \times 3 = 15$ then $15 \div 3 = 5$

$10 \div 10 = 1$ **$40 \div 10 = 4$** **$70 \div 10 = 7$** **$100 \div 10 = 10$**

$20 \div 10 = 2$ **$50 \div 10 = 5$** **$80 \div 10 = 8$**

$30 \div 10 = 3$ **$60 \div 10 = 6$** **$90 \div 10 = 9$**

$10 \div 10 =$

$40 \div 10 =$

$20 \div 10 =$

$50 \div 10 =$

$30 \div 10 =$

$60 \div 10 =$

$$70 \div 10 =$$

$$90 \div 10 =$$

$$80 \div 10 =$$

$$100 \div 10 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do $24 \div 4 =$ and get 4 but you **CANNOT** flip it and do $4 \div 24$ to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving $24 \div 4 = ?$ Then just re-state the problem as $4x = ?$
 $= 24 \rightarrow$ think "what times 4 will give me 24?"
