

DIVISION FACTS

Fluency set 1

DIVISION FACTS set 1

REMEMBER:
DIVISION IS THE INVERSE OF MULTIPLICATION!

so...

if $5 \times 3 = 15$ then $15 \div 3 = 5$

$$10 \div 1 = 10$$

$$7 \div 1 = 7$$

$$4 \div 1 = 4$$

$$1 \div 1 = 1$$

$$9 \div 1 = 9$$

$$6 \div 1 = 6$$

$$3 \div 1 = 3$$

$$8 \div 1 = 8$$

$$5 \div 1 = 5$$

$$2 \div 1 = 2$$

10 ÷ 1 =

7 ÷ 1 =

9 ÷ 1 =

6 ÷ 1 =

8 ÷ 1 =

5 ÷ 1 =

$$4 \div 1 =$$

$$3 \div 1 =$$

$$2 \div 1 =$$

$$1 \div 1 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do $24 \div 4 =$ and get 4 but you **CANNOT** flip it and do $4 \div 24$ to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving $24 \div 4 = ?$ Then just re-state the problem as $4x = 24$ -> think "what times 4 will give me 24?"
