

DIVISION FACTS

Fluency set 2

DIVISION FACTS set 1

REMEMBER:
DIVISION IS THE INVERSE OF MULTIPLICATION!
So...
if $5 \times 3 = 15$ then $15 \div 3 = 5$

$$2 \div 2 = 1$$

$$8 \div 2 = 4$$

$$14 \div 2 = 7$$

$$20 \div 2 = 10$$

$$4 \div 2 = 2$$

$$10 \div 2 = 5$$

$$16 \div 2 = 8$$

$$6 \div 2 = 3$$

$$12 \div 2 = 6$$

$$18 \div 2 = 9$$

$$2 \div 2 =$$

$$8 \div 2 =$$

$$4 \div 2 =$$

$$10 \div 2 =$$

$$6 \div 2 =$$

$$12 \div 2 =$$

$$14 \div 2 =$$

$$18 \div 2 =$$

$$16 \div 2 =$$

$$20 \div 2 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do $24 \div 4 =$ and get 4 but you **CANNOT** flip it and do $4 \div 24$ to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving $24 \div 4 = ?$ Then just re-state the problem as $4x = 24$ -> think "what times 4 will give me 24?"
