

# DIVISION FACTS

Fluency set 3

# DIVISION FACTS *set 3*

REMEMBER:  
DIVISION IS THE INVERSE OF MULTIPLICATION!

so...

if  $5 \times 3 = 15$  then  $15 \div 3 = 5$

$$3 \div 3 = 1$$

$$12 \div 3 = 4$$

$$21 \div 3 = 7$$

$$30 \div 3 = 10$$

$$6 \div 3 = 2$$

$$15 \div 3 = 5$$

$$24 \div 3 = 8$$

$$9 \div 3 = 3$$

$$18 \div 3 = 6$$

$$27 \div 3 = 9$$

$$3 \div 3 =$$

$$12 \div 3 =$$

$$6 \div 3 =$$

$$15 \div 3 =$$

$$9 \div 3 =$$

$$18 \div 3 =$$

$$21 \div 3 =$$

$$27 \div 3 =$$

$$24 \div 3 =$$

$$30 \div 3 =$$

Remember division **does not** have a commutative property. The bigger number will always be first when dividing in third grade. You can do  $24 \div 4 =$  and get 4 but you **CANNOT** flip it and do  $4 \div 24$  to get 4 as your answer.

Remember division is the inverse of multiplication. If you are having a difficult time solving  $24 \div 4 = ?$  Then just re-state the problem as  $4x = 24$  -> think "what times 4 will give me 24?"
